University of Central Florida

2003 AIR Forum

Tampa, FL

May 19, 2003

Overview

- What are “organizational peers”?
- UCF Mission and Vision
- What is a Metropolitan Research University?
- Overview of multi-phase approach and cluster analysis
- UCF case study
 - Institutions to be considered
 - Selection variables
 - Methods used
 - Results

The University of Central Florida

- Established in 1963 in Orlando, Florida: Metropolitan Research University
- Grown from 1,948 to 39,000 students in 39 years
 - 32,500 undergraduates and 6,500 graduates
- Doctoral intensive
 - 76 Bachelors, 57 Masters, 3 Specialist, and 19 PhD programs
- Second largest undergraduate enrollment in state
- Approximately 1,000+ faculty and 3500 staff
- Six colleges and two schools
 - Arts and Sciences, Business Administration, Education, Engineering and Computer Science, Health and Public Affairs, Honors, Optics, and Hospitality Management

Revised UCF Mission (2002)

- The University of Central Florida is a public multi-campus **metropolitan research university**, dedicated to serving its surrounding communities with their diverse and expanding populations, technological corridors, and international partners.
- The mission of the university is to
 - offer high quality undergraduate and graduate education, student development, and continuing education;
 - **conduct research and creative activities**; and
 - provide services that enhance the intellectual, cultural, environmental, and economic development of the metropolitan region, address national and international issues in key areas, establish UCF as a major presence, and contribute to the global community.

New UCF Vision

- The University of Central Florida will be the nation's ***leading metropolitan research university*** recognized for its intellectual, cultural, technological, and professional contributions and renowned for its outstanding programs and partnerships

What is an Organizational Peer?

- Peer
 - “Equal to another in abilities, qualifications ...”
 - “Something of equal worth or quality”
- Organizational peer
 - Comparable organization
 - How to determine?
- Aspirational peer
 - Organization that is a goal or objective to become like
- University organizational peer
 - Considers university as a whole
 - Not program or discipline

In Search of Peers—General Approach

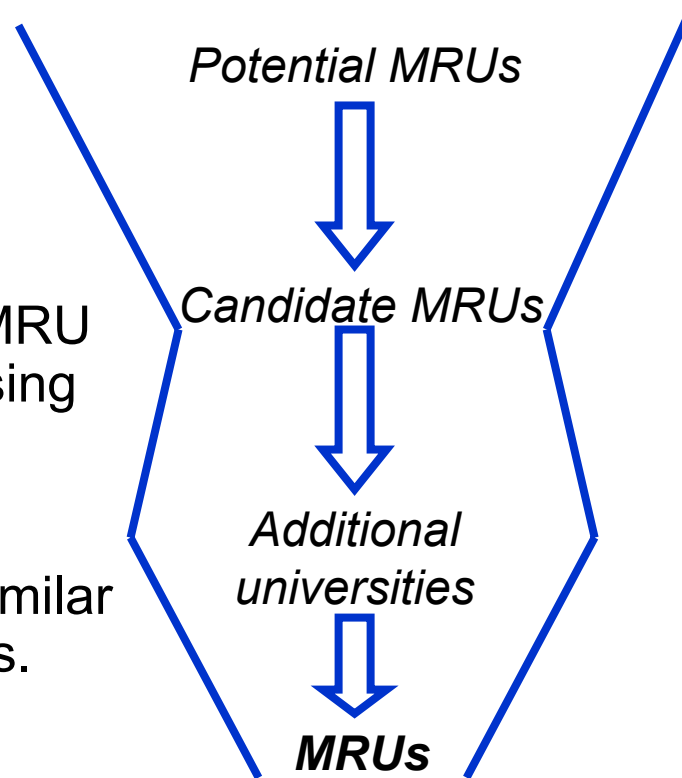

- Focus on identifying potential MRU “comparable peers”
 - Metropolitan and research focus
 - Similar characteristics to UCF
- Identify data feasibility and sources
- Identify related efforts
 - Coalition of Urban and Metropolitan Universities (CUMU)
 - Portraits of Universities with Metropolitan Alliances (PUMA)
- Initial data collection
 - Sort, organize, and assess consistency and availability
- Quantitative analysis—cluster analysis
- Evaluation
- Further analysis and synthesis

Why Did We Look at this Issue?

- Strategic planning discussions (SPC and focus groups)
 - Revised UCF Mission with clearly established UCF VISION
- Led to the basic questions:
 - **What is a Metropolitan Research University?**
 - To which universities do we compare UCF?
 - Dimensions: Metropolitan and Research
 - **How will we know when UCF is the **Leading** Metropolitan Research University?**
 - What measures do we use?
 - Mission related
 - Performance focus
- Focus on IDENTIFYING metropolitan research universities

Multi-Phase Structure

- Initial Identification
 - Qualitative identification of potential metropolitan research universities
- Aggregation and screening
 - Quantitative evaluation of potential MRU to define class of institutions comprising MRU
- Refinement
 - Classify set of MRU institutions as similar peers, other peers, and remote peers.
- Follow-on
 - Repeat refinement phase with updated data and additional institutions

Methodology—Cluster Analysis

- Multivariate statistical procedure used as an exploratory data analysis tool
- Partitions a set of objects into relatively homogeneous subsets based on inter-object similarities and between group differences
 - Universities group into clusters with
 - minimal differences between pairs of universities in a cluster
 - maximum differences between the clusters
- Many different algorithmic approaches each resulting in a different view of the data
- All use some notion of a “distance metric”

Two Primary Approaches

- Mutually exclusive clustering (or partitioning methods)
 - You specify number of clusters
 - The algorithm assigns initial cluster centers 
 - The algorithm assigns objects to the “nearest” center
 - The algorithm iteratively tries to reduce within cluster distances and increase distance between cluster centers
- Hierarchical clustering methods 
 - You specify distance measure
 - The algorithm finds “closest” pair of objects and combines to form a cluster and repeats.
 - Clusters formed in later stages include previous clusters

Mutually Exclusive Cluster Approach

- Iteratively reduces within cluster distances and increases distance between cluster centers
- SPSS includes K-Means Clustering
 - Allows for missing data and good at handling larger data sets
- Used in screening, refinement, and follow-up phases
 - Variable selection
 - Number of variables included in analysis had to be reduced from the original 80 variables collected (number of variables must be less than the number of institutions analyzed)
 - Multiple analyses conducted using different number of clusters
 - Wanted final member cluster size not to exceed 25
 - Reviewed results using different number of clusters

Sample Output: Cluster Membership

Cluster Membership				
Case Number	VARIABLE	Variable Label	Cluster	Distance
1		Old Dominion Univ.	1	2.228
2		Univ. of Nevada at Las Vegas	1	2.242
3		Univ. of South Florida	2	2.446
4		Georgia State Univ.	1	2.351
5		Univ. of Wisconsin, Milwaukee	1	2.113
6		Univ. of Cincinnati-Main Campus	4	2.361
7		San Diego State Univ.	1	1.968
8		State Univ. of New York, Albany	1	3.366
9		Univ. of Alabama at Birmingham	2	4.549
10		Univ. of Louisville	2	2.136
11		Florida Atlantic Univ.	1	1.997
12		Florida International Univ.	1	1.363
13		Cleveland State Univ.	1	2.493
14		Portland State Univ.	1	1.628
15		Univ. of Missouri at St.Louis	1	3.162
16		Univ. of Texas- Arlington	1	1.743
17		Univ. of Central Florida	1	1.884
18		George Mason Univ.	1	2.437
19		Indiana Univ. - Purdue Univ. at Indianapolis	2	2.948
20		Kent State Univ.	1	2.397
21		North Carolina State Univ.	4	2.046
22		Univ. of Delaware	3	.000
23		Univ. of North Carolina at Charlotte	1	1.764
24		Univ. of North Texas	1	2.736
25		Virginia Commonwealth Univ.	2	1.821
26		Wayne State Univ.	4	2.579
27		Western Michigan Univ.	1	3.605
28		Wright St. Univ.	1	2.709

Sample Output: Cluster Centers

Distances between Final Cluster Centers

Cluster	1	2	3	4	5
1		5.344	6.739	6.678	2.423
2	5.344		6.951	6.677	4.861
3	6.739	6.951		8.286	7.532
4	6.678	6.677	8.286		6.134
5	2.423	4.861	7.532	6.134	

Sample Output: ANOVA

ANOVA

	Cluster	Error	F	Sig.		
	Mean Square	df	Mean Square	df		
ZUGTOGRH Zscore: Ratio of UG to GR headcount	1.757	3	.905	24	1.941	.150
ZFTTOPTTE Zscore: Ratio of full time to part time	6.709	3	.286	24	23.429	.000
ZUGDTOUG Zscore: Ratio of UG degrees awarded to	3.142	3	.732	24	4.290	.015
ZGRDTOGR Zscore: Ratio of GR degrees awarded to	1.111	3	.986	24	1.127	.358

ZGRPROAW Zscore: Masters Programs Awarded degree	4.281	3	.590	24	7.258	.001
ZDOPROAW Zscore: Doctoral Programs Awarded degree	4.441	3	.570	24	7.793	.001
ZFTFACUL Zscore: Full time faculty	7.804	3	.150	24	52.182	.000
ZEXP_STU Zscore: Expenditure per student	3.594	3	.676	24	5.318	.006
ZRD_FUND Zscore: Total R & D funds	6.735	3	.283	24	23.794	.000
ZENDOWME Zscore: Ending market value of endowmen	6.063	3	.367	24	16.516	.000
ZPUB_FTF Zscore: Publications per Full Time Facu	4.757	3	.530	24	8.970	.000

The F tests should be used only for descriptive purposes because the clusters have been chosen to maximize the differences among cases in different clusters. The observed significance levels are not corrected for this and thus cannot be interpreted as tests of the hypothesis that the cluster means are equal.

Method We Used to Combine Multiple K-means Results

Hierarchical Clustering Approach

- Finds “closest” pair of objects and combines to form a cluster and repeats
- In SPSS
 - Analyst specifies distance measure
 - Squared Euclidean distance frequently used
 - Analyst specifies linking method
 - Between-groups, Wards’s method, nearest neighbor, furthest neighbor
 - Eliminates institutions with any missing data
 - Standardizes variables
 - Use multiple methods
- Used only in refinement and follow-up phases

Sample Output: Proximity Matrix

Variable Selection

- Data initially collected for 80 variables
- Initial analyses conducted with 43 variables
- Evaluations with various variables removed resulted in 29 variables for screening analysis phase
- Decision review resulted in modifying the variable list— 21 final variables for refinement phase
- Further reduction to 12 variables by eliminating school size and metropolitan area characteristics

Note: [Data for variables and institutions are available upon request and will eventually be located at <http://uaps.ucf.edu/Benchmarking.html>]

Screening Phase Variables

- P-Actual population 1999
- P-% Urban population
- P-% White population
- P-% 18-24 years old
- P-% College or graduate degree
- P-% White collar occupation
- S-Ratio of UG to GR headcount
- S-Ratio of full-time to part-time headcount
- S-Total headcount
- S-% headcount White
- S-Ratio UG headcount to degrees awarded
- S-Ratio of GR headcount to graduate and doctoral degrees awarded
- ~~S-Doctoral degrees awarded~~
- ~~S-Doctoral programs offered~~
- S-Medical school
- ~~S-Acceptance rate~~
- ~~S-High school GPA~~
- F-Full-time faculty
- ~~F-Part time faculty~~
- ~~F-Tenured faculty~~
- \$-Ratio of expenditures per student
- \$-Endowment
- \$-R & D expenditures

Preliminary Screening Analysis

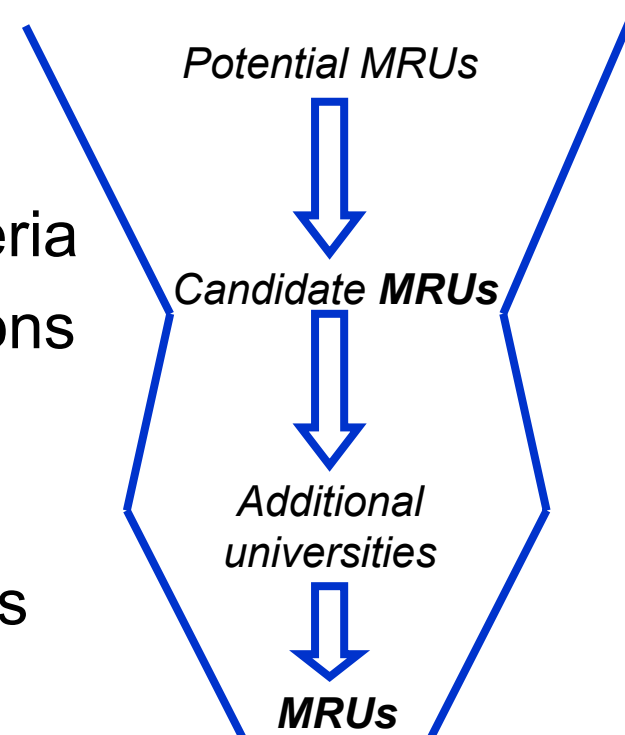

- Removed institutions with a total enrollment of less than 13,500 student headcount
 - Focus on “large” metropolitan research universities
 - Final institution list included 42 of the original 66 institutions
- Reduced the number of variables
- Categorized doctoral, R&D, and medical school variables as “research variables”

Synthesis of Screening Phase

- Ran analyses with research and without research variables
- For both sets of variables, ran analyses removing selected demographic and institution variables individually
- Number of clusters ranged from 4 to 10
- Universities were selected as potential MRU peers if they significantly showed up in the UCF cluster for three of four categories using research variables and cluster size

UCF Case Study

- Start with existing peers
- Identify large pool of candidates
- Identify relevant data to use as criteria
- Screening of variables and institutions
- Refine criteria
- Consider additional institutions
- Identify most similar university peers
- Repeat process until satisfied

Moving from Screening Phase to Refinement Phase

- Screening phase identified
 - 16 potential peers
 - 6 almost potential peers
 - 5 current peers not otherwise included
- Review of selection variables
 - Modified variable list to 21 variables
- Review of institutions
 - Threshold criteria (>13,500 students, doctoral programs, research funding)
 - Reduced candidates to 29 institutions

Refinement Phase Variables

- *P-Actual population 1999*
- *P-% Urban population*
- *P-% White population*
- *P-% 18-24 years old*
- *P-% College or graduate degree*
- *P-% White collar occupation*
- **S-Ratio of UG to GR headcount**
- **S-Ratio of full-time to part-time headcount**
- *S-Total headcount*
- *S-% headcount White*
- **S-Ratio UG degrees awarded to UG headcount**
- **S-Ratio of graduate and doctoral degrees awarded to GR headcount**
- **S-Bachelor Programs awarded degrees**
- **S-Masters Programs awarded degrees**
- **S-Doctoral Programs awarded degrees**
- *S-Medical school*
- **F-Full-time faculty**
- **\$-Ratio of expenditures per student**
- **\$-Endowment**
- **R-R & D expenditures**
- **R-Publications per full-time faculty**

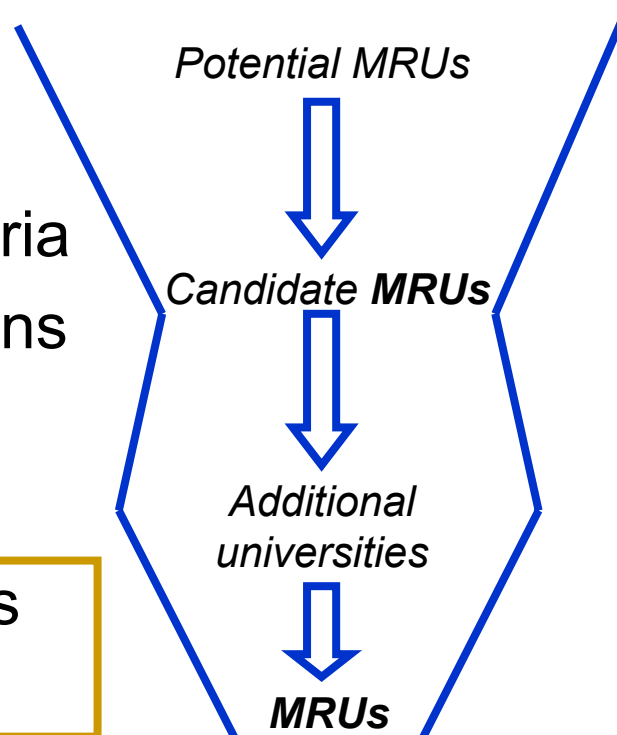

Note: Final variables in boldface; underlined variables added from screening phase

Synthesis of Refinement Phase

- Ran both K-Means and Hierarchical analyses
 - All 21 variables
 - Reduced set to 12 variables (removed 6 population, total headcount, ethnicity, and medical school variables)
- Used both standardized z-scores and 0-1 scale for data
- Number of clusters ranged from 2 to 10 for K-means
- Used multiple linking methods for hierarchical clusters
- Evaluated tabular and graphical results

UCF Case Study

- Start with existing peers
- Identify large pool of candidates
- Identify relevant data to use as criteria
- Screening of variables and institutions
- Refine criteria
- Consider additional institutions
- Identify most similar university peers
- Repeat process until satisfied

Results of Refinement Phase

- University of Wisconsin– Milwaukee (P)

(current peer) (P)—PUMA (C)—CUMU (M)—MUG

Other Large MRU Peers (10)

- Georgia State University (C) (P) (M)
- Indiana University – Purdue University, Indianapolis (C) (P)
- Kent State University
- State University of New York, Albany
- University of Louisville (C) (M)
- University of South Florida (C)
- University of North Texas (C) (P)
- Virginia Commonwealth University (C) (M)
- Western Michigan University
- Wright State University (C)

Remote Large MRU Peers (5)

- North Carolina State University
- University of Alabama at Birmingham (P)
- University of Cincinnati (P)
- University of Delaware
- Wayne State University (P) (M)

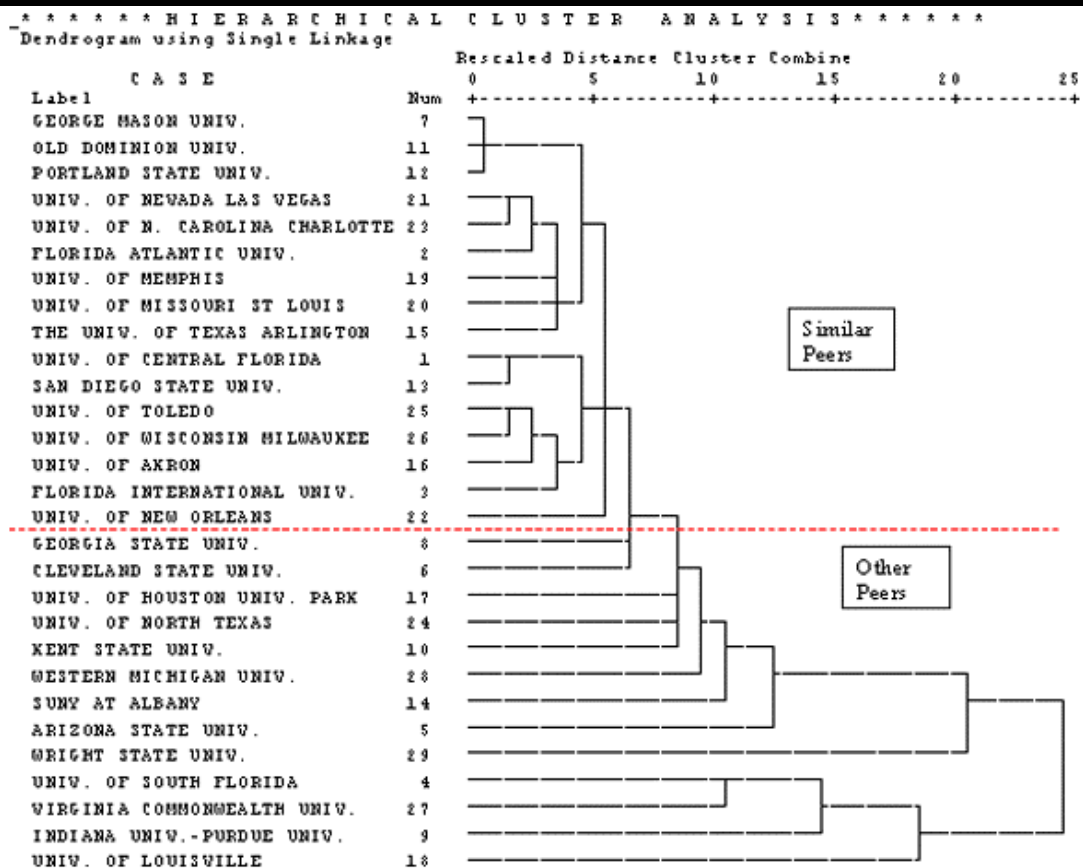

Moving from Refinement Phase to Follow-on Phase

- Refinement phase identified
 - 13 potential peers
 - 10 almost potential peers
 - 5 current peers not otherwise included
- Review of institutions
 - Interest in identifying aspirational peers
 - Academic and administrative input provided 25 additional institutions for review (some were already included in earlier phases but repeated in this phase)
 - State peers' (FAU, FIU, and USF) identified peer groups provided another 9 institutions for review
 - Increased candidates to 62 institutions

Synthesis of Follow-on Phase

- Ran both K-Means and Hierarchical analyses
 - Using same reduced set of 12 variables used in the refinement phase (with population, total headcount, ethnicity, and medical school variables removed) and a reduced set of 13 variables (including medical school variable)
- Used both standardized z-scores and 0-1 scale for data
- Number of clusters ranged from 2 to 10 for K-means
- Used multiple linking methods for hierarchical clusters
- Evaluated tabular and graphical results

Implementation and Use

- Official review and approval
- Develop relevant performance measures for MRUs
 - Management focus
 - Accountability considerations
 - PUMA dimensions (access and support; student learning in the urban context; diversity and pluralism; civic engagement; urban relevance of programs and scholarship)
- Assess vision—become the nation’s leading metropolitan research university
 - Identify “comparison” peers—most similar performance
 - Identify “aspirational” MRU peers—*best-in-class*
- Use for benchmarking and continuous improvement

Observations

- Cluster analysis works well for identifying peers
- Selecting appropriate criteria variables requires very careful consideration
 - Multiple analyses required to determine if any are “drivers”
- Require very close attention to finding the “correct” data
 - Some data (e.g., publications) are very tricky
- Broad selection of “potential” peers is required
- Need to distinguish between current and aspirational peers
- “Political” considerations
- User involvement
